

## R&d&I and Laboratory Management SAP GRC

---

As the person responsible for the management and maintenance of the company's SAP GRC laboratory (Governance, Risk Management & Compliance), you will initially be supported by the project department and will be responsible for: -

- Generating the file structure in order to be able to carry out the risk analysis automatically, avoiding the generation of individual files.
- Methodology for the extraction of SAP tables avoiding the realization of several extraction exercises trying to define from the beginning all the tables to be downloaded for the correct execution of the "Cyber Security Diagnosis".
- Development of the Methodology for the automatic execution of the Cybersecurity Diagnostic.
- Development of the automatic indicators for the automatic evaluation of the Safety Diagnosis avoiding the manual evaluation by the consultants.
- Find ways to increase efficiency in the execution of analyses and the operation of the SAP laboratory in general.
- Make suggestions for changes, improvements and how to implement them.
- Train internal staff periodically in the use of the SAP laboratory.
